

# Data Scientist

at Keystone ([View all jobs](#))

Boston, New York, San Francisco, Seattle

Keystone is a premier strategy and economics consulting firm solving the most complex challenges of competition, strategy, and intellectual property for leading technology firms and global brands. We work at the forefront of influential technology cases changing consumer behavior and regulation laws and impacting society on a global scale. Keystone brings an interdisciplinary approach, leveraging the intersection of economics, technology, and business strategy to deliver transformative ideas.

The Keystone Advanced Technology Solutions (KATS) group is made up of engineers, computer scientists, and data scientists, and plays a key role in Keystone's interdisciplinary approach. Senior Technologists on the KATS team focus on everything from natural language processing to machine learning models, and then apply those approaches to relevant client cases. This gives Keystone the ability to create prototypes on the fly, and adds tremendous value for our clients.

At Keystone you will work on big ideas with Fortune 100 tech clients, grow your professional network, and gain relationships that last a lifetime. Partner with leading academic experts from Stanford, Harvard, MIT, Wharton, and other top universities on some of the most interesting problems today. You'll work on a broad range of fast-paced technology focused projects with cutting-edge companies and immediate impact. Apply your technical skills to economics, legal, and business strategy problems, and develop your leadership skills working with client-facing project teams on high-stakes cases.
