# AI Product Engineer

Location

Remote

Type

Full time

Department

Engineering

## About us

At Clarify, we aim to empower high-impact companies to build better customer relationships. We're creating the next-generation CRM for modern revenue teams. For 20 years, we've been using software built for how the world worked last century, despite how our businesses have evolved.

We're a team of founders who've built and sold companies together, alums from Atlassian, Microsoft, Amplitude, Branch, mParticle, and Ramp, among others. We're building a generational company and just getting started. Join our mission to revolutionize the world's largest software category.

Clarify is a remote-first company with 6 hours of overlap on PST. We spend one week a quarter together in person as a team.

## About the role

You'll join our engineering team as the founding AI Product Engineer, helping to establish the foundation of our intelligence capabilities. You'll work on determining how best to incorporate LLMs, embeddings, and other AI technologies into Clarify's product. You'll be exploring the boundaries of what's possible and finding innovative ways to apply new learnings to Clarifiry's product offering.

## What you'll do

- Work with the team to prototype and experiment with new AI capabilities.

- Collaborate with cross-functional teams to deliver product features on time.

- Uplevel the team as a domain expert, teacher, and learner on AI.

- Partner with our founders on the strategy of our intelligence capabilities.

- Have high ownership over technical decisions and direction.

- Help educate and guide all future engineers in our technology stack.

- Establish standards and best practices for engineering.

## Your background

- 8+ years of software engineering experience.

- Experience using LLMs, embeddings, or other ML natural language technologies.

- Hands-on experience with data pipeline technologies: Spark, Flink, etc.

- Proficient with our technology stack: React, TypeScript, Next.js, and Postgres.

- Pragmatic problem solver with a focus on delivering impact.

- Demonstrated personal and professional maturity.

- Experience taking software from ideation to production.

- Strong problem-solving and critical-thinking skills.

- Excellent communication and collaboration skills.

- Startup experience or a desire to build your own company one day.

## Benefits

- Competitive salary based on experience and location

- Meaningful equity in an early-stage startup

- $200/mo internet and cell phone stipend

- $200/mo wellness stipend

- 3% 401k match*

- $1k/mo healthcare stipend*

*US-based employees
